help us do our part
in creating a
compliant and
eco-friendly jobsite.

BARDMATERIALS.COM

WHY ARE CONCRETE WASHOUT BAGS SO IMPORTANT?

- 1** States and municipalities now regulate construction sites for all concrete, cement, mortar and paint waste discharge.
- 2** Wash out water can have a high PH and suspended solids, which if not properly contained could cause damage to the environment..
- 3** Area municipalities have ordinances that prohibit the dumping of concrete wash water into the city's storm sewer system which would include the following places; streets and gutters or any other facility owned or maintained by the municipality for use in collecting, transporting or disposing of storm water. Violators are subject to local fines.
- 4** It is the contractor's responsibility to provide an on-site washout area. If the MDP's are not provided an acceptable area for clean up, a small bag will be used and billed to the customer for a nominal fee.
- 5** These lightweight, yet durable bags come in two, one, and 1/10th yard sizes.
- 6** Two and one yard bags can be placed at a jobsite for multiple uses. Concrete washout materials must be contained where waste concrete can solidify in place and excess water can safely evaporate.
- 7** Chute bags are one time only and carried in the cab of the MDP's and it is the customer's responsibility to dispose of the bags correctly.
- 8** When used properly, these bags will help all of us do our part in creating a compliant and eco-friendly jobsite.
